

MOBILE FUELING ON-DEMAND SUPPORTS OLDER PERSONS

The mobile fueling industry delivers a **more accessible, reliable, economical and safer** way for older people to fuel their vehicles. **Completely contactless**, older persons can forego issues presented at gas stations, such as handling the **heavy and germ-laden pump handles**, by having fuel brought **directly** to their vehicles.

For the **same cost** as a self-service tank of gas, industry leader Booster Fuels deploys a **superior fuel delivery system** backed with **cutting-edge industry technologies** and run by **licensed and trained** service professionals.

The **Department of Transportation** cites mobility and transportation as a major impediment to our aging communities. By **2050**, they estimate the American 65+ population to more than **double to 88.5 million**.

Following the **COVID-19 pandemic**, assisted and independence-promoting living centers across the country need mobile fueling for their transportation programs to **keep caretakers and their older patrons safe and healthy**.

Regulation is the greatest barrier to the benefits of mobile fueling for the aging community. Many parts of the country want to regulate mobile fueling like the traditional gas station, but it's so much more.

Booster Fuels supports AB 905 in California, which will enable the growth of mobile fueling across the state by streamlining regulation of the industry, bringing the benefits of mobile fueling to more than 8 million older persons in California.
